

# **8 4v lithium battery pack voltage**

## Overview

---

The maximum voltage for a 2-cell LiPo battery is 8.4 volts. It is crucial to avoid overcharging your LiPo batteries since it can cause them to catch fire, explode, or even burn your house down. When charging your 2-cell LiPo battery, it is best to use a charger that has an automatic shut-off feature, which prevents.

The nominal voltage of a fully charged LiPo battery is 3.7 volts per cell. For example, a 2-cell LiPo battery will have a nominal voltage of 7.4 volts, and a 3-cell LiPo.

The nominal voltage of a fully charged 4-cell LiPo battery is 14.8 volts. The actual voltage of a fully charged 4-cell LiPo battery varies between 16.8 and 14.0 volts.

A 7.4 volt LiPo battery is a 2-cell battery, and its nominal voltage when fully charged is 8.4 volts. However, its actual voltage when fully charged can vary between.

The LiPo battery voltage chart is essential for anyone who uses LiPo batteries. Knowing the nominal and actual voltage of a LiPo battery at different levels of.

For standard 2S LiPo batteries, 8.4V (4.2V/cell) is the correct, safe, fully charged voltage—no exceptions. Staying within these limits ensures safety, maximum performance, and long-term reliability.

## 8 4v lithium battery pack voltage
