

ASEAN Lithium Battery Communication Site

Overview

What is ASEAN battery technology conference?

About ASEAN Battery Technology Conference ASEAN Battery Technology Conference (ABTC) stands out as the premier battery conference in ASEAN, attracting an audience of over 250 participants. We look forward to engaging with a diverse range of participants, including cell manufacturers, pack integrators, and recycling companies.

How competitive is the ASEAN battery market?

The ASEAN battery market is highly competitive, with a mix of domestic and international manufacturers. Companies such as GS Yuasa, Panasonic, and Samsung SDI dominate the lithium-ion segment, while local firms like PINACO in Vietnam and Amalgamated Batteries in Malaysia maintain strong positions in the lead-acid sector.

Are used EV batteries available in ASEAN?

This report has provided future projections of available used EV batteries in ASEAN. Its magnitude is compared with the estimated need for stationary use for variable renewable energy sources. The report has also provided policy implications for ASEAN countries towards facilitating the reuse of batteries from EVs.

Why is battery production growing in ASEAN?

Supply chain issues and regulations continue to hinder production growth. Battery production in ASEAN has steadily grown over the past five years. Lithium-ion battery output is expanding to meet EV and electronics demand. Vietnam and Indonesia use nickel reserves to attract foreign investment.

Who makes Li-ion batteries in Singapore?

Singapore's Li-ion battery industry is primarily operated by subsidiaries of international manufacturers. Companies such as Energizer Singapore and

Murata Electronics Singapore play a key role in domestic battery production, while lead-acid battery manufacturing is led by firms such as Chloride Batteries and Narada Asia Pacific.

Do ASEAN Power Systems need backup batteries?

According to an analysis on ASEAN power systems (focusing on the Indochinese Peninsula and the Malay Peninsula) by ERIA (2021), it is estimated to need backup batteries of 500–600 GWh when VRE accounts for 40% of the generation mix in 2040. A substantial gap is likely to exist.
