Overview

Is Afghanistan the Saudi Arabia of lithium?

The global race for lithium, a crucial component in electric vehicle (EV) batteries, has shifted attention to Afghanistan, hailed as the “ Saudi Arabia of lithium.” As China dominates the EV market, Afghanistan’s vast lithium deposits have become a geopolitical focal point.

Could lithium be used to produce batteries in Afghanistan?

The Taliban spokesman even mentioned the possibility to use the lithium to produce batteries inside Afghanistan and export them. Such a prospect appears far-fetched though. «Afghanistan has all the raw materials necessary to produce lithium-based batteries,» Dr. Wnuk told SIGA.

How much lithium does Afghanistan have?

A decade ago, U.S. geologists estimated Afghanistan’s mineral wealth, including lithium at \$1 trillion — enough potentially to stabilize the country’s fragile economy. Afghanistan’s current Ministry of Mines and Petroleum has identified an abundance of lithium reserves in provinces like Helmand, Nuristan, and Ghazni.

Is a lithium-ion battery race taking place in Afghanistan?

While Goldman Sachs predicts a tripling of the lithium market by 2025, a race to secure supplies is taking place in Afghanistan. The lithium-ion battery story begins with chemistry and ends with innovation.

Could lithium be the backbone of Afghanistan's economy?

The economic impact of this mining discovery is simply enormous: the total reserves represent about 1,000 billion. The two main sources of lithium are hard rock sources in pegmatites and in solution within continental brines, both of which are present in Afghanistan. This might become the backbone of the Afghan economy.

Does Afghanistan need a lithium monopoly?

Afghanistan must limit dependence on investments driven mainly by external strategic interests. Maintaining control over its lithium reserves is equally critical, necessitating a robust national framework for extraction and processing.
