

# **Angola Energy Storage Project Operation Model**

## Overview

---

Should Angola invest in energy storage solutions?

With the ongoing solar projects under development in Angola with an installed capacity amounting to 500 MW, it is urgent to start thinking about efficient energy storage solutions. What structural challenges must be addressed for Angola to seize its renewable energy potential?

.

Can Angola deploy pumped-storage hydroelectricity & hydrogen solutions?

Fernando Prioste, CEO of COBA Group, talks to The Energy Year about Angola's potential for deploying pumped-storage hydroelectricity and hydrogen solutions as it develops a robust energy industry and the central role of COBA Group in the country's power arena.

What should Angola's priorities be to achieve energy self-sufficiency?

What should Angola's priorities be in order to achieve energy self-sufficiency?

Angola has everything it needs to achieve energy self-sufficiency through renewable sources – not only water, but also sun and wind.

Can a gas grid be used in Angola?

This is not possible in Angola as there is no gas grid, but the hydrogen obtained from renewable energies can be shipped overseas or converted into ammonium. In turn, this chemical compound can be used as an energy storage component that could be exported or used for the fertiliser industry.

Should reversible dams be built in Angola?

For the time being, it is not necessary to transform the existing hydropower plants into reversible dams, but some of the upcoming hydropower projects in Angola should be built with a reversible powerhouse with capacity to store

production that exceeds consumption.

Will Angola become a hydrogen producer?

There's a possibility that Angola will become a hydrogen producer using the excess of power during non-peak consumption periods, considering the future capacities of solar and wind projects. With its experience in the energy sector, COBA will be able to help the national authorities with this challenge.
