

Are New Zealand's solar photovoltaic panels reliable

Overview

Why should you install solar panels in New Zealand?

Solar panels are a clean and renewable source of energy. By harnessing the power of the sun, we can reduce our reliance on fossil fuels and lower our carbon footprint. There are numerous benefits to installing solar panels in New Zealand. One of the main advantages is the potential for significant cost savings on your energy bills.

Does solar PV cost in New Zealand?

Sunshine is free and abundant in New Zealand, and who doesn't like the idea of lower electricity bills plus clean and green energy. However, installing solar PV comes at a cost, and there are several important factors to consider before you invest in solar PV.

Is New Zealand a good place for solar energy?

Some people worry that New Zealand's climate isn't ideal for solar energy, but the reality is quite the opposite. Christchurch and Canterbury, for instance, receive around 2,000 hours of sunlight per year, making them prime locations for solar. Modern panels are designed to generate electricity even on cloudy days by capturing diffused light.

Does New Zealand use solar?

Globally, solar PV uptake has increased significantly over the past decade. While uptake in New Zealand has been slower to date, there is potential for greater utilisation as technology costs decrease, particularly at the grid-scale and on commercial building rooftops. How much of our electricity comes from solar?

2021 data is sourced from MBIE.

Is Solar worth it in New Zealand?

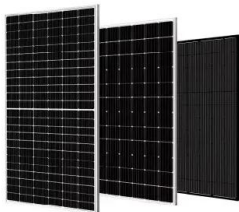

As of March 2021, 31,589 solar power systems have been installed in New Zealand. With solar photovoltaics (PV) becoming more and more popular, it's a good idea to find out if installing one of these systems on your home or business will be worth the investment.

How many solar panels are installed in New Zealand?

In October 2022, Electricity Authority data showed 43,641 solar systems installed across New Zealand, adding up to 240 MW. This makes up an estimated contribution of under 1% of total electricity consumption. Globally, solar PV uptake has increased significantly over the past decade.
