

# Burundi 3000W solar energy

**Low Voltage  
Lithium Battery**

**6000+** Cycle Life

## Overview

---

Does Burundi have solar power?

However, solar makes up a small fraction of energy supplied in Burundi due to its relatively low installed capacity of 5 MW (“Burundi Energy Profile” 2021). Solar made up 5% of all installed capacity in 2020, generating a total of 8 GWh of electricity for the year, which accounted for 2% of annual electricity generation in Burundi.

What is the primary energy supply in Burundi?

The remainder of the primary energy supply is from oil (“Burundi Energy Profile” 2021). However, a majority (98%) of the renewable energy supply in Burundi is bioenergy. The remainder of the renewable energy supply is hydroelectric, and solar power (“Burundi Energy Profile” 2021).

How many people in Burundi have electricity?

Approximately 7% of the population of Burundi has access to electricity. In rural areas, only 1% of the population has access. 49% of the urban population has access to electricity (“Burundi” 2022). In sub-Saharan Africa, the electrification rate is 26% on average (“Burundi” 2021). For those connected to electricity, quality is low.

What can a Burundi Energy Center do?

For example, such a center in Burundi could focus on funding and implementing solar-plus-storage technologies for rural and remote households. The 2015 Electricity Act enables foreign investments into the power sector. In addition, laws in Burundi allow tax benefits for energy investment and public-private partnership.

Why does Burundi need a gas power plant?

This is driven by a lack of supply, grid inefficiencies (24% of supply lost due to transmission and distribution network technical issues (Nsabimana 2020)),

lack of investment in new infrastructure, and dependence on a leased gas power plant (“Burundi ClimateScope 2021” 2021).

Which region of Burundi has a high potential for wind energy harvesting?

Another study found that the Bujumbura region has a high potential for wind energy harvesting (Placide, Lollchund, and Dalso 2021). Geothermal: According to the Burundi Ministry for Energy and Mines, the Rift Valley region of the country is likely to have geothermal potential (Manirakiza 2012).
