Overview

What is the primary energy supply in Cambodia?

1. 5. The total primary energy supply in Cambodia was about 4.8 million tons of oil equivalent in 2015.8 Fuel wood and other biomass accounted for an estimated 44.4% of the total, oil and petroleum products for 38.5%, coal for 10.7%, hydropower for 3.6%, and electricity imports for 2.8%.

Can solar power be used in Cambodia?

Renewable energy, particularly solar, holds great promise for Cambodia. However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season.

Why is Cambodia's energy sector a success story?

Cambodia's energy sector has been a tremendous success story over the last 20 years. From experiencing frequent power cuts and limited regional electricity access in 2004 to a stable grid in the capital, Phnom Penh, and a village electrification rate of over 98%.

Why is Bess a good investment for Cambodia?

BESS can provide much needed grid stabilisation, reliability, decarbonisation while also reducing imported power. As battery storage demand and investment continues to grows, Cambodia is well-positioned to build a reliable, low cost, sustainable energy system for the future.

Can solar energy be used intermittently in Cambodia?

However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season. The Cambodian Minister of Mines and Energy, Keo Rattanak, is targeting 70% renewable energy by 2030.

Should Cambodia regulate rooftop solar power?

In March 2023, Cambodia launched the “Principles for Permitting the Use of Rooftop Solar Power,” to regulate rooftop solar installations and ensure “transparency, accountability, and fairness.” Renewable energy, particularly solar, holds great promise for Cambodia.
