

Can solar panels be installed after the roof is tiled

Overview

So, can you install solar panels on a tile roof?

The short answer is yes—but it requires careful planning and the right installation technique to ensure your roof remains intact and your solar system lasts for decades. Can solar panels be installed on roof tiles?

Roof tiles, such as those from Brava Roof Tile, have specific designs to allow water to flow freely from the tiles to the gutters and down the drainage spout. Installing solar panels on top of the tiles prevents water from reaching the tiles, leading to inefficient flow and potential seepage into the roof.

Can solar panels damage a tile roof?

Future damage from vibrations: Even if tiles remain intact during installation, they can weaken over time. Wind moving between the solar panels and the racking system can create vibrations that cause tiles to crack down the road. Because of these risks, standard installation methods won't work for tile roofs—especially lightweight ones.

How do I install solar panels on a lightweight tile roof?

The best way to install solar panels on a lightweight tile roof is through a method called inset solar installation, also known as a “comp-out” installation. This technique removes the section of tile where the solar panels will be installed and replaces it with composite shingles before mounting the solar array.

Can solar panels be installed on lightweight tiles?

If installers attempt to mount solar panels directly onto lightweight tiles, several issues can arise: Tile breakage: Walking on or drilling through these tiles can cause cracks or breaks, which may lead to roof leaks and structural damage.

Can solar be installed on clay tiled roofs?

Clay tile roofs, which are common in the American southwest, can be a challenge for solar installers. While they have cultural significance and longevity, installing solar panels on them has historically been more expensive and risky than other roof types.

What is the new way to replace tiles for solar installation?

The new, better way: Double-flashed tile replacements that perfectly fit in place of a single tile. Replacing small sections of tile with composite shingles, installing mounts meant for composite shingle roofs, and placing dummy tiles over the holes. Cutting or drilling into tiles to attach hooks under them that support solar racks.

Can solar panels be installed after the roof is tiled
