

Cooperative solar panels

Overview

What is Co-op Solar?

Co-op Solar is an easy and affordable way to start using clean solar energy from your local electric cooperative. With Co-op Solar, there are no expensive rooftop solar panels to buy, install, or maintain. Co-op Solar handles the solar power, and your home gets a little more sunshine.

Can a solar co-op save money?

Joining together with other people who also want to go solar can result in saved money through the bulk purchase of solar technologies. That's the logic behind solar cooperatives, or co-ops. A solar co-op is made up of individuals, businesses, or both, partnering up to meet their shared energy needs and typically receiving bulk discounts.

Are community solar panels better than co-op solar?

Community solar is a great option for people who rent their homes, live in condo buildings, or don't have a suitable roof. Co-ops, on the other hand, are a good option for Americans who want the benefits of installing rooftop solar arrays but are concerned about upfront installation costs and "soft costs" like permitting.

Can a community solar co-op be incorporated?

However, in other states, outside investment is permitted and states are beginning to recognize the value of the co-op structure in a community solar setting. Usually, cooperatives are formed by filing articles of incorporation with the state.

Are there other organizations that facilitate solar co-ops?

In addition to Solar United Neighbors, there are several other organizations that facilitate solar co-ops, like Solarize and Solar Crowd Source. Solar co-ops enable members to easily learn about all aspects of solar in partnership with

their fellow co-op members.

Is a solar co-op right for You?

If a solar co-op sounds like the right fit for you, find one in your community—or talk to your neighbors about starting a new one. Check out our solar energy resources for consumers to learn more about how you can take advantage of the benefits of solar energy.
