

# **Cost price of power signal tower base stations in Libya**

## Overview

---

How much electricity does Libya have?

In 2010 prior to the present troubles, Libya had a total electricity installed capacity of 6.8GW, which was generated by power plants either fuelled by home produced oil or natural gas. At this time the country enjoyed a near 100% electrification rate and electricity was supplied free of charge to users.

What is the power sector in Libya?

Revised in September 2020, this map provides a detailed overview of the power sector in Libya. The locations of power generation facilities that are operating, under construction or planned are shown by type – including liquid fuels, gas and liquid fuels, natural gas, nuclear, solar (PV and CSP) and wind.

Which power lines are shown in Africa?

Existing and future transmission lines are shown ranging from 110KV to 400kV. Actual and planned cross-border interconnectors are also shown including lines to Egypt, Tunisia and Sicily. Power generation data was drawn from our African Energy Live Data platform, which contains project level detail on power plants and projects across Africa.
