

Current price of a complete mobile energy storage power supply in Cambodia

Overview

Why is electricity so expensive in Cambodia?

Electricity prices in Cambodia are among the most expensive in the region due to a shortage of integrated high-voltage transmission systems and the high cost of imported diesel fuel. Power in provincial cities is more expensive and less reliable than the supply in Phnom Penh.

What is the primary energy supply in Cambodia?

1. 5. The total primary energy supply in Cambodia was about 4.8 million tons of oil equivalent in 2015.8 Fuel wood and other biomass accounted for an estimated 44.4% of the total, oil and petroleum products for 38.5%, coal for 10.7%, hydropower for 3.6%, and electricity imports for 2.8%.

Why is Bess a good investment for Cambodia?

BESS can provide much needed grid stabilisation, reliability, decarbonisation while also reducing imported power. As battery storage demand and investment continues to grows, Cambodia is well-positioned to build a reliable, low cost, sustainable energy system for the future.

How much money does Cambodia need to build a power plant?

The Cambodian government has stated in its PDP that it will need \$9 billion of investment to develop new power plants and expand the national grid, of which \$2.5 billion has been approved between 2022 and 2025. Opportunities exist for power generation and transmission equipment.

How much electricity will Cambodia generate in 2023?

The Electricity Authority of Cambodia (EAC) predicts that the total installed capacity will increase to 4,945 MW of electricity in 2023. Cambodia generated 1,331 MW from hydropower plants, 1,025 MW from coal-fired plants, 642 MW of its energy from oil-powered plants, and 437 MW from solar.

Can solar energy be used intermittently in Cambodia?

However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season. The Cambodian Minister of Mines and Energy, Keo Rattanak, is targeting 70% renewable energy by 2030.
