

Djibouti energy storage project time

Overview

Construction has begun with an initial phase of 25 MW, with 10 MW on storage batteries. This phase will be operational by the first quarter of 2026, with a possible extension of up to 100 MW in the next five years. What is Djibouti's new solar project?

The project will be the first solar Independent Power Project (IPP) in Djibouti and will be located in Grand Bara, south of Djibouti City. The solar project is being fully developed by AMEA Power under a Build-Own-Operate and Transfer (BOOT) model and will generate 55 GWh of clean energy per year, enough to reach more than 66,500 people.

What is the source of Djibouti's energy?

Approximately 65 percent of Djibouti's electricity comes from external sources. The remaining energy comes from its own geothermal, solar, wind, and biomass sources. According to the International Renewable Energy Agency (IRENA), this reliance on imported energy can lead to price volatility that can hinder economic development plans.

How can Djibouti lower its energy prices?

Djibouti can reduce energy prices by diversifying energy sources toward renewables. The free port of Djibouti finances its own power supply but is not entitled to sell its surplus energy. A regulator is needed to fairly and effectively regulate electricity prices in Djibouti.

What is the cost of electricity in Djibouti?

The cost of electricity in Djibouti is 23.4 US cents per kWh (in 2017). This is higher than the costs in Ethiopia, which were 4.7 and 4.4 US cents/kwh in 2016 and 2017, respectively.

What is the potential for development in the energy sector in Djibouti?

The potential for development in Djibouti's energy sector remains high. The

page below gives an overview of the energy sector in Djibouti.

Who will take over the Djibouti electricity project?

The Sovereign Fund of Djibouti (FSD) will be joining the project before financial close as a minority shareholder. The offtaker for the project will be Electricité de Djibouti. As part of its strategic plan, the Government of Djibouti aims to reduce CO2 emissions by around 40% by 2030.
