

The image shows a black rectangular battery with the following text and symbols on its side:

- Specs**
 - Rated Voltage: 12.8V
 - Rated Capacity: 200Ah
 - Rated Power: 2560Wh
 - Max. Charging Current: 20A
 - Max. Discharging Current: 20A
 - Max. Charging Voltage: 14.6V
 - Max. Discharging Voltage: 10.8V
 - Max. Operating Temperature: 40°C
 - Max. Storage Temperature: 40°C
- Caution**
 - Not for use in applications where safety is critical.
 - Do not short circuit, overcharge, or over-discharge.
 - Do not expose to fire or high temperatures.
 - Do not use in explosive atmospheres.
 - Do not use in applications where safety is critical.
 - Do not use in applications where safety is critical.
 - Do not use in applications where safety is critical.
 - Do not use in applications where safety is critical.
- LiFePO₄**
- POWER YOUR DREAM**
- 12.8V200Ah 2560Wh**
- Recycling symbols: a crossed-out wheeled bin, a recycling symbol, and a CE mark.
- A warning symbol: a crossed-out flame.

Overview

What is the business case for battery energy storage?

The business case for battery energy storage varies by application and use case. For 'prosumers' (producers-consumers), the payback period of a home energy storage system can be calculated based on the spread between the cost of producing and storing rooftop solar power and the cost of purchasing electricity from the local utility.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What happened at Gateway energy storage facility?

On May 15, 2024, Gateway Energy Storage Facility in San Diego, California, experienced a BESS fire with continued flare-ups for seven days following the fire. The facility held about 15,000 nickel manganese cobalt lithium-ion batteries.

How many nickel manganese cobalt lithium-ion batteries were stored at Gateway?

The facility held about 15,000 nickel manganese cobalt lithium-ion batteries. Following the incident, EPA has required the Gateway facility to conduct extensive environmental monitoring during battery handling and disposal operations and submit detailed work plans and progress reports.

Why should you choose fluence energy storage?

Energy storage provides the agility and efficiency to keep pace with an evolving energy landscape. Unlock the full potential of your network with

energy storage. Our products are designed for the most demanding industrial applications and have stood the test of time. Discover the Fluence energy storage product that's right for you.
