

EU energy storage battery project construction

Overview

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy Storage Inventory, launched by the European Commission. How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

How many MW of battery energy storage system Engie reaches in Europe?

With this new project, ENGIE reaches 500 MW of BESS capacity in Europe, either installed, under construction or at an advanced stage of development. On 31 October 2024, Belgian grid operator Elia announced the result of the country's 4th CRM auction and the selection of ENGIE's Battery Energy Storage System (BESS) project in Kallo.

How important is battery storage in Europe?

The storage process can be done on the grid and individual buildings levels, which has made Europe a renowned home of energy storage technologies. To further put the importance of battery storage in perspective, Europe needs a total of 187 GW of energy storage by 2030, 122 GW of which will be battery storage—that is about 65.24%.

How many energy storage projects are there in Europe?

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology. It lists 32 countries and is led by Germany, with 472 projects. It is followed by the United Kingdom (455 projects), Spain (147 projects) and Italy (112 projects).

What is the energy storage capacity in the EU?

The installed energy storage capacity in the EU has been on an upward trajectory, supported by both grid-scale and decentralized installations. Here's a breakdown of some of the leading storage technologies: Battery Storage Capacity: Battery storage capacity in the EU has seen rapid growth, with more than 10 GW installed as of recent years.

Is the battery storage age just beginning in Europe?

Walburga Hemetsberger, CEO of SolarPower Europe (she/her), said: "If Europe has already entered the solar age, the battery storage age is just beginning. With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system."

EU energy storage battery project construction

Report-Battery-energy-storage

With this paper, EUROBAT aims to contribute to the EU policy debate on climate and energy and explain the potential of Battery Energy Storage to enable the transition to a sustainable and ...
