

# **Ecuador lead-acid energy storage battery application**

## Overview

---

Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.

How does a lead acid battery work?

Each battery is grid connected through a dedicated 630 kW inverter. The lead-acid batteries are both tubular types, one flooded with lead-plated expanded copper mesh negative grids and the other a VRLA battery with gelled electrolyte.

What is a bipolar lead-acid battery?

Note (1): Bipolar lead-acid batteries are being developed which have energy densities in the range from 55 to 60 Wh/kg (120–130 Wh/l) and power densities of up to 1100 W/kg (2000 W/l). J. Electr.

What are the different types of lead-acid batteries?

The lead-acid batteries are both tubular types, one flooded with lead-plated expanded copper mesh negative grids and the other a VRLA battery with gelled electrolyte. The flooded battery has a power capability of 1.2 MW and a capacity of 1.4 MWh and the VRLA battery a power capability of 0.8 MW and a capacity of 0.8 MWh.

What is energy storage using batteries?

Energy storage using batteries is accepted as one of the most important and efficient ways of stabilising electricity networks and there are a variety of different battery chemistries that may be used.

How long does it take a lead-acid battery to charge?

Switching from idle to full charge or discharge could be achieved in  $<20\text{ms}$ . The project was successful in demonstrating that a large lead-acid battery could perform a wide range of duty cycles reliably over an extended period of time.
