

Energy storage box requirements for battery swap stations

Overview

How far can a battery swap go?

Battery swapping is also emerging in other international markets beyond China. Janus Electric, an Australian manufacturer, advertises ranges of around 250–370 miles (400–600 km) for its HDV technology that allows for battery swapping.

Can battery electric trucks reduce HDV emissions?

Scaling up electrification efforts to reduce HDV emissions will thus require the consideration of zero-emissions solutions that can complement battery electric trucks (BETs) with fixed batteries to provide a zero-emissions solution that will meet the needs of zero-emissions long-haul freight. One promising technology is battery swapping.

How does HDV battery swap work?

The technology can be implemented as an add-on battery attachment for traditional diesel trucks or through specialized BETs designed for battery swapping. Although HDVs still need to stop for battery swapping, the process allows for the vehicle range to be extended and recharged within a short amount of time.
