## Overview

---

What is a charging pile?

A charging pile is a type of outdoor charging station with waterproof, dustproof, and corrosion proof functions and an environmental protection design, featuring a protection grade of IP 54.

How does a random charging model work in energy storage?

After that the power of grid and energy storage is quantified as the number of charging pile, and each type of power is configured rationally to establish the random charging model of energy storage fast charging station. Finally, the economic benefit is analyzed according to the queuing theory to verify the feasibility of the model. 1.

Why is it important to maintain the charging pile?

The importance of maintaining charging piles lies in the fact that influences by the changeable environment and ageing inner parts can cause various faults. Regular examination and maintenance are necessary during both product storage and using processes.

How much does a charging pile cost?

The price of charging piles varies greatly, ranging from hundreds to thousands of RMB, causing the price difference. The most important thing is the difference in power. The price of 11KW is about 3000 or more, the price of 7KW is 1500-2500, and 3.5 The portable price of KW is under 1500.

What is the difference between charging pile and charging stations?

1.Charging pile refers to a charging device with a charging gun and a human-machine interface, which is simply an electrical device that can be charged, either in one piece or in a split type.

What is the installation distance of the charging pile?

The minimum installation distances for the charging pile are: no less than 700 mm from the back door to the wall, and no less than 500 mm from the side face to the wall. (5) The canopy is built together with the charging pile. (6) This installation method is just a sample for reference.
