

# **Energy storage containers benchmarked against foreign brands**

**2MW / 5MWh  
Customizable**

## Overview

---

What is the energy storage Grand Challenge?

This report, supported by the U.S. Department of Energy's Energy Storage Grand Challenge, summarizes current status and market projections for the global deployment of selected energy storage technologies in the transportation and stationary markets.

Are China-based battery energy storage systems becoming more popular?

The last 12-18 months have seen the emergence of more China-based battery energy storage system (BESS) manufacturers and system integrators on the global stage, all selling 20-foot, 5MWh container products (or higher, like CATL's 'zero-degradation' Tener).

Why is Panasonic a leading energy storage company?

Thanks to a wide and varied portfolio of solutions, Panasonic has positioned itself as one of the leaders in the energy storage vicinity. Panasonic is one of the industry's top names due to its advances in innovative battery technology alongside strategic partnerships and extensive experience in manufacturing high-quality products.

Which countries are deploying the most onboard hydrogen storage?

By 2030, over 35-GWh LHV of onboard hydrogen storage could be deployed annually. China and other Asian countries are projected to deploy the most onboard hydrogen storage, with Europe close behind. Fuel cell buses and passenger light-duty FCEVs are projected to have the greatest demands for onboard hydrogen storage.

Which storage chemistry can meet DC market performance requirements?

Another new storage chemistry that provides both high power and very long cycle life, Prussian blue chemistry, can meet the demanding DC market performance requirements. DOE funded a startup with this chemistry and

their 2020 launch exceeds 50,000 kW . Li-ion batteries are deployed in both the stationary and transportation markets.

What are the different types of energy storage technologies?

This report covers the following energy storage technologies: lithium-ion batteries, lead-acid batteries, pumped-storage hydropower, compressed-air energy storage, redox flow batteries, hydrogen, building thermal energy storage, and select long-duration energy storage technologies.
