

# **Haiti s second batch of communication base station inverters connected to the grid**

## Overview

---

Why is distributed solar PV the only energy source in Haiti?

Since only about 13% of the people even have grid access, distributed solar pv is the only energy source that can supply all the people electricity for now. Haiti has limited energy resources: no petroleum or gas resources, small hydroelectricity potential and rapidly declining supplies of wood fuels.

Why is electricity so expensive in Haiti?

This leaves the country vulnerable to global oil price fluctuations, which directly impact the cost of electricity. Haiti also faces challenges in terms of lack of grid access, reliability of electricity service, and the prevalence of wood and charcoal fuels for home energy consumption.

How does electricity work in Haiti?

With very limited access to electricity, most of the population in Haiti depends on charcoal as a source of energy. The National Electricity Company (Electricité d'Haïti - EDH) was created in 1971 to operate the newly built Péligre hydroelectric plant and the nation's power system.

How much power does Haiti have reliably?

Haiti has an installed capacity of 250 to 400 Megawatts (MW) but only 60 percent of it is reliable. Many generation units and grid elements need rehabilitation and repair work. The distribution network has not been rehabilitated for more than 40 years.

Can solar energy be used effectively in Haiti?

Solar energy can be used effectively in Haiti, offering energy self-sufficiency to the most isolated cities in the absence of a power grid. The country's location in the tropics gives it very strong solar energy potential. It is believed that solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

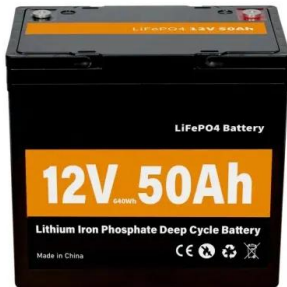

What challenges does Haiti face in generating and distributing electricity?

Haiti faces significant challenges in generating and distributing electricity reliably. The lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels.
