

# High nickel lithium iron phosphate battery pack

## Overview

---

Do electric cars have lithium-iron phosphate batteries?

However, you may have noticed that some electric cars are now arriving with lithium-iron phosphate - more commonly known as 'LFP' - batteries. This is a different sort of battery chemistry to the lithium-ion NMC batteries that are still the most common type of battery in electric cars. It's not so much a case of which one's best, though.

Are LFP batteries better than nickel based batteries?

LFP batteries have long been touted as a more robust alternative to traditional nickel-based batteries, like nickel manganese cobalt (NMC) packs. They're cheaper, pose a lower fire risk, and generally last longer.

What is a lithium-Ferro phosphate battery?

This is the other common battery technology that you find in electric cars. You may also see them described as lithium-ferro phosphate, or as lithium-iron phosphate, but it's basically different names for much the same 'LFP' battery chemistry.

What are the advantages of lithium iron phosphate (LFP)?

Jack of all trades. 2. LFP (Lithium Iron Phosphate) have a long life cycle that can be regularly charged to 100%, cheaper to produce, good thermal and chemical stability (can fully charge and discharge without worries), with it slightly lagging in cold weather performance, both in range and charging curve.

How much power does a lithium iron phosphate battery have?

Lithium iron phosphate modules, each 700 Ah, 3.25 V. Two modules are wired in parallel to create a single 3.25 V 1400 Ah battery pack with a capacity of 4.55 kWh. Volumetric energy density = 220 Wh / L (790 kJ/L) Gravimetric energy density > 90 Wh/kg (> 320 J/g). Up to 160 Wh/kg (580 J/g).

How often should you charge a lithium iron phosphate pack?

Especially with LFP (Lithium Iron Phosphate) packs, just charge the darn thing to 100% and maximize the full range potential. If it makes you feel better (full disclosure it'd apply to me too) you could charge it to 90% daily, with a few 100% charges during the week to keep the BMS (Battery management system) calibration happy.

## High nickel lithium iron phosphate battery pack
