

# **Honduras generates electricity at a power station**

## Overview

---

Power Purchase Agreements (PPAs) that ENEE has signed with independent power producers (IPP) running fossil fuel power plants now account for the majority of energy generation in Honduras. Overview The electricity sector in has been shaped by the dominance of a vertically integrated utility; an.

With an installed generation capacity of 1,568 (2007), Honduras relies on a thermal-based power system (accounting for nearly two-thirds of its total installed capacity), which is very vulnerable to high and volatil.

The overall electricity coverage is 69%. In rural areas it reaches only 45%, which contrast with the 94% coverage in urban areas (2006). The table below presents the access data per number of households and consumers.

duration is a measure of the reliability of supply to the distribution networks. This measure decreased for most regions in Honduras from 2001. However, in 2005, a general increase in the interruptio.

The Electricity Law of 1994 assigns the policymaking function to an Energy Cabinet chaired by the President of the Republic with the Ministry of Natural Resources and Environment (Secretaria de Recursos Naturales).
