✓ OUTDOOR ENERGY STORAGE CABINET

✓ OUTDOOR MODULE CABINET

Overview

The cost of home battery storage has plummeted from over \$1,000 per kilowatt-hour (kWh) a decade ago to around \$200-400/kWh today, making residential energy storage increasingly accessible to homeowners. How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

What is a household energy storage system?

As a result, most families not only achieve self-sufficiency of household electricity but also store excess electricity. The market demand for household energy storage system is growing. The household energy storage system is similar to a miniature energy storage power station, while its operation is free from the pressure of the utility.

What is energy storage?

The ability to store energy for days, weeks, or months to compensate for a longer-term supply disruption or seasonal variability on the supply and demand sides of the energy system (e.g. storing heat in the summer to use in the winter via underground thermal energy storage systems).
