

# How big a battery can be used with 4 kW of energy storage

## Overview

---

What is battery energy storage capacity?

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres.

How much energy can a battery store?

Similarly, the amount of energy that a battery can store is often referred to in terms of kWh. As a simple example, if a solar system continuously produces 1kW of power for an entire hour, it will have produced 1kWh in total by the end of that hour.

How much power does a battery system need?

For example, if your critical loads require 2,000 watts of power and you need backup power for 24 hours, your total load would be 48,000 watt-hours (2,000 watts x 24 hours). Once you have determined your total load, you can select a battery system that can meet your power needs.

How long does a 4 MW battery last?

A 4 MWh battery with a 1 MW power rating has a 4-hour duration. A 1 MWh battery with a 2 MW power rating has a 0.5-hour duration. We've written about storage duration in more detail [here](#). C-rate or 'charge rate', is another way of defining how quickly a battery can be charged or discharged relative to its storage capacity.

Which batteries have a power and energy capacity rating?

All batteries have both power and energy capacity ratings. Tesla's Powerwall 2, for example, has a continuous output capacity of 5kW (higher rates possible for short periods) and a storage capacity of 13.2kWh (at the beginning of its warrantied life).

How do I calculate the amount of energy stored in a battery?

Calculating the amount of energy stored in a battery will use a different formula than a solar battery bank calculator. For one, you'll need information about the electric charge in the battery, also known as amp-hours. Let's review the steps to calculating the amp hours in your battery. We'll use V to represent this unit.

## How big a battery can be used with 4 kW of energy storage

---

### How Big of a Battery Do You ACTUALLY Need for Your Home in ...

Without a battery: They lose \$0.47 every time they export instead of store. With a 20 kWh battery: They store daytime energy and use it at night--saving \$280/month. Their ...
