

How much does the energy storage power supply cost in the Democratic Republic of Congo

Overview

How much power does the Democratic Republic of the Congo have?

The Democratic Republic of the Congo has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The Inga Dam on the Congo River has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region.

What are the main sources of energy in the Congo?

Hydropower: For which the Congo River is the main source, with an average flow rate 42,000 m³ /s. Biogas: Coming mainly from both plant and animal waste. Solar: The DRC has noticeably high solar radiation averaging 6 kWh/m² /day.

What are the renewable sources of power in DRC?

The DRC's potential renewable sources are hydropower, biomass, solar, wind and geothermal, while the non-renewables would be oil, natural gas & uranium . Approximatrely 9% of the country's generated domestic power comes from hydropower, specially the two Inga dams (Inga I & Inga II) .

How does the DRC generate energy?

Therefore, the DRC exports all of its oil production capacity, and imports all the refined products such as gasoline, jet fuel, kerosene, aviation gas, fuel oil and liquefied petroleum gas (LPG) . Even though the DRC possesses prosperous and varied resources for energy generation, the energy sector still falls far behind.

How much power does DRC have?

The DRC's total hydropower capacity is about 100,000 MW, with the Inga damn solely counting for 40,000-45,000 MW . A decade ago, during the year 2009, 89% of DRC's total population did not have access to electricity, leaving

only 11% with access, while 94% of the population were completely dependent on biomass as the main cooking fuel .

How can we better understand electricity demand in the DRC?

To better understand present and future electricity demand in the DRC, a concerted effort by public agencies and donors, under the leadership of the Ministry of Energy and Hydraulic Resources to collect better data will be needed, as will a flexible approach to quickly factor evolving demand growth.
