

# How much is a photovoltaic panel

## Overview

---

How much does it cost to install solar panels?

It costs around \$30,000 to install solar panels. That's a big number, but incentives usually lower it significantly. The average U.S. solar shopper needs about 11 kilowatts (kW) of home solar to cover their electricity usage.

How much does a 12 kW solar panel cost?

The average cost of a 12 kW solar panel installation on EnergySage is \$20,754 after the federal tax credit. You'll probably save anywhere from \$34,000-\$120,000 over 25 years by going solar. Solar panels are just 12% of the total cost of a solar panel installation.

How do I calculate the cost of a solar panel system?

You can do this by taking the total dollar cost of your solar panel system, subtracting out any included battery costs, and dividing it by the number of watts (kW x 1000). It's crucial to obtain both cash and financing estimates for your system so you understand how much you are paying in total.

How much does a monocrystalline solar panel cost?

Monocrystalline solar panels are the most popular choice for residential installation (nearly all residential solar panels installed in 2022 were monocrystalline) because they have the highest efficiency rates from 17% to 22%. The average cost for these panels is between \$1 and \$1.50 per watt, but prices may differ depending on location.

Are solar installations cheap?

Solar installations aren't cheap, but the actual equipment is a relatively small part of the total cost. It's only 35% of your total installation cost, according to the US Department of Energy. Soft costs, also known as the hidden costs of installing solar, are nonhardware costs, and they make up 65% of your total solar costs, according to the DOE.

## Are solar panels worth it?

Solar panels are worth it for most homeowners, especially those dealing with high electricity rates. Solar panels can reduce or eliminate your electric bill for 25+ years. With a 6-to-10-year average payback period, this means 15+ years of free electricity—a reduced carbon footprint and significant long-term savings.
