

# **How much profit does the Tunisian energy storage power station make**

## Overview

---

What percentage of Tunisia's electricity is renewable?

In 2022, only 3% of Tunisia's electricity is generated from renewables, including hydroelectric, solar, and wind energy. While STEG continues to resist private investment in the sector, Parliament's 2015 energy law encourages IPPs in renewable energy technologies.

Who produces the most electricity in Tunisia?

In 2020, the state power utility company, STEG, controlled more than 90% of the country's installed power production capacity and produced more than 80% of the total electricity in Tunisia. The remainder was produced by Tunisia's major independent power producer (IPP), Carthage Power Company (CPC), which owned a 471-MW combined-cycle power plant.

Will private players drive the Tunisia power market?

Moreover, the government has plans to launch tenders for about 3.5 GW of renewable energy of about USD 3.5 billion by 2030, or approximately 350 MW per year, over the next ten years. Hence, the above points indicate that the increasing involvement of private players in the market is likely to drive the Tunisia power market over the forecast period.

How Teri support Tunisia's energy sector?

The multi-year support to Tunisia's energy sector, particularly to increase renewable energy generation, has been financed by both the TERI Anchor Trust Fund and the Compact with Africa Trust Fund – an associated Trust Fund to the TERI Umbrella program.

How much power does Tunisia produce?

Tunisia has a current power production capacity of 5,944 megawatts (MW) installed in 25 power plants, which produced 19,520 gigawatt hours in 2022. State power utility company STEG controls 92.1% of the country's installed

power production capacity and produces 83.5% of the electricity.

Will the got build a power plant in Tunisia in 2024?

In 2024, the GOT is also expected to launch a tender for the construction of at least one 470-550 MW combined-cycle power plant in Skhira (south Tunisia) as an IPP. In May 2018, the Ministry of Energy and Mines published a call for private projects to build renewable power plants with a total capacity of 1,000 MW (500 MW wind and 500 MW solar).

## How much profit does the Tunisian energy storage power station m

---

### [How much does the energy storage power station earn?](#)

3. Revenue from capacity markets adds another dimension, with energy storage systems capable of providing power during peak periods. By acting as a buffer, these stations ...

### [Product Information](#)

### [How much profit does an energy storage power station make?](#)

Energy storage power stations contribute to grid stability by providing essential services such as load balancing and frequency regulation. During periods of high energy ...

### [Product Information](#)

### [Deploying Battery Energy Storage Solutions in Tunisia](#)

solar PV and wind together accounting for nearly 70%. The integration of these variable energy sources into national energy grids will largely depend on storage technologies, and among ...
