

How to connect the base station battery to the power supply

Overview

How do I connect a battery to a base station/repeater?

Batteries must be connected to the base station/repeater through an Argus Technologies Battery Reverting Charger, Model #010-523-20 (Motorola Model #L1884) for 24 V charging systems. These systems were developed specifically for this interface and tested by Motorola for proper base station/repeater operation.

How do I pick up a base station/repeater?

DO NOT pick up the base station/ repeater by holding the Preselector (if so equipped). Use the handles on the front of the base station/repeater, or the Power Supply and Power Amplifier casings when picking up the base station/repeater. Remove the station front bezel from its chassis locking clip by carefully pulling it forward.

Does a CB radio come with a power supply?

With your CB radio in place, you can connect the cables from both the power supply and the antenna. One key aspect of maximizing the signal and range of your home base CB radio is to adjust your antenna's height.

Should you set up a home base station?

Setting up a home base station for your CB radio can provide several benefits. You can stay connected with friends and family, monitor emergency channels, and be better prepared for any situation. While it might seem daunting, setting up a CB base station is actually a simple and straightforward process.

How do you power a CB radio at home?

To power a CB radio at home, you'll need a power supply module that provides 12 to 14 volts of direct current (DC). This is because CB radio technology is designed for use in vehicles and requires only a small amount of voltage.

What voltage does a CB radio require?

To power a CB radio at home, you'll need a power supply module that provides 12 to 14 volts of direct current (DC). This is because CB radio technology is designed for use in vehicles and requires only a small amount of voltage.
