

# **How to expand the capacity of lithium battery packs**

## Overview

---

Can you mix different capacity lithium batteries?

Yes, you can mix different capacity lithium batteries, whether a normal 12V 100Ah battery or a Lithium server rack battery. You can combine different capacity batteries in parallel. You cannot combine different capacity batteries in series. There are a few points you need to consider when wiring in parallel. Let's explore these three points.

Can lithium ion batteries be connected in parallel?

When assembling lithium-ion cells into functional battery packs, it is common to connect multiple cells in parallel. When lithium ion battery packs are connected in parallel and cycled, matching of internal resistance is important in ensuring long cycle life of the battery pack.

How to increase battery capacity of a Yeti Lithium Power Station?

To increase the battery capacity of a Yeti Lithium power station, you can connect Yeti Tank Expansion batteries. But in order to do so, you need a Yeti Link. Let's take a closer look at each of them and how they work. To connect a Yeti Tank battery to the Yeti power station, you're going to need the Yeti Link Expansion Module. [Check Price at Amazon.](#)

What is a tank expansion battery?

The Yeti tank expansion battery is not a lithium battery but a deep-cycle AGM battery. You can add as many Tank batteries as you want since each battery has two in/out cables. Connecting the battery to your Yeti is as easy as connecting a cable. The Yeti Tank battery has two EC8 connectors coming out of it.

Why does lithium ion have a higher voltage than LiFePO4?

This is because lithium-ion has a slightly higher voltage than LiFePO4. The batteries get charged all at the same time. A smaller battery will be at the

same voltage as a larger battery. Therefore, the state of charge will be equal in all batteries. Let me explain with a diagram where all the batteries are charged to 70%. 2.

Can lithium ion be combined with LiFePO<sub>4</sub>?

It is not possible to combine lithium-ion with LiFePO<sub>4</sub>. This is because lithium-ion has a slightly higher voltage than LiFePO<sub>4</sub>. The batteries get charged all at the same time. A smaller battery will be at the same voltage as a larger battery. Therefore, the state of charge will be equal in all batteries.
