

## Overview

---

The transmission distance of a single-mode optical cable at one level (that is, from the BBU to an RRU or from one RRU to another RRU) is 40 km. The RRU supports a maximum of three levels of cascading, which enables the longest distance between RRUs and a BBU to be 100 km. What is a Huawei base station?

Let's dive into a technical explanation. A base station, also known as an eNodeB (for 4G LTE) or gNodeB (for 5G NR) in Huawei's terminology, is a piece of equipment that facilitates wireless communication between user equipment (UE) like smartphones, tablets, and IoT devices, and the core network of the telecommunications provider.

What systems does Huawei offer?

Huawei provides comprehensive management and control systems, such as Huawei's U2000 or Huawei's Cloud BTS. These systems enable operators to monitor, configure, and manage base stations remotely, ensuring optimal network performance and reliability.

What is a base station antenna system?

**Antenna System:** At the heart of a base station is the antenna system. This system radiates and receives radio frequency (RF) signals to and from mobile devices.
