

# **Iceland user-side energy storage power station**

## Overview

---

What is the capacity of the largest power station in Iceland?

The largest power station in Iceland has a capacity of 240 megawatts (mw). Other major hydroelectric stations are at Hrauneyjarfoss (210 mw) and Siglufjörður (10 mw). Efforts are underway by the government to export hydroelectric energy to Europe by transporting it via submarine cables.

What is the largest power plant in Iceland?

The largest power station by far is Kárahnjúkar Hydropower Plant (690 MW), which generates electricity in the area north of Vatnajökull for the production of aluminum. Iceland uses geothermal energy for heating as well as electricity generation.

How is electricity generated in Iceland?

Nearly all of Iceland's electricity (>99%) is generated from renewables (mainly hydroelectric dams and geothermal). The islands of Grimsey and Flatey rely on diesel as they are not connected to the grid. Over 80% of electricity in Iceland is generated in hydroelectric power stations.

Which hydroelectric power stations are in Iceland?

The hydroelectric power stations, historically all run by Landsvirkjun, are central to the existence of Iceland as an industrialized country. The largest power station by far is Kárahnjúkar Hydropower Plant (690 MW), which generates electricity in the area north of Vatnajökull for the production of aluminum.
