

Icelandic Communications Green Base Station Enterprise

Overview

The first connection to the British Isles reached in Iceland in 1906 by the . Around the same time telephone communication was opened between and nearby . By 1911 a telephone line connected Reykjavik in the west of Iceland to Seyðisfjörður in the east via in the north. A line to the was constructed a few years later, and by 1929 a line along the south coast of t.

What is Icelandic telecommunications legislation?

It aims to promote accessible and rapid telecommunications, which are cost-efficient and effective, secure and environmentally friendly. Icelandic telecommunications legislation is based to a large extent on EU legislation in the field due to Iceland's obligations under the EEA Agreement.

Is telecommunications a diversified market in Iceland?

Telecommunications in Iceland is a diversified market. Iceland has a highly developed telecommunications sector with modern infrastructure. Multiple wholesale and retail providers are operated in a competitive market.

How does the telecommunications policy affect the competitiveness of Icelandic regions?

The competitiveness of Icelandic regions is determined in part by their access to secure, high-speed, telecommunication network connections. The government's telecommunications policy is regularly revised. It aims to promote accessible and rapid telecommunications, which are cost-efficient and effective, secure and environmentally friendly.

Why is communication infrastructure important in Iceland?

Good communication infrastructure is a key aspect of well-being and residence quality, as well as the basis for a variety of industrial activities. The competitiveness of Icelandic regions is determined in part by their access to secure, high-speed, telecommunication network connections.

Does Iceland have a telecommunications sector?

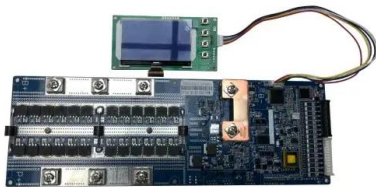

Iceland has a highly developed telecommunications sector with modern infrastructure. Multiple wholesale and retail providers are operated in a competitive market. As of 2024, Iceland's telecom infrastructure is fully digitised and mostly fibre based, with 93% of households having full-fibre availability. Landlines are based on VoIP technology.

What makes Iceland a good data center location?

The energy in Iceland comes from 100% renewable sources with no CO2 emission. The energy supply is stable, secure and at very competitive prices. This makes Iceland unique. More information about Iceland as a Data Center location can be found here at [Invest in Iceland](#). The main power companies are Landsvirkjun, HS Orka and ON Power .
