Overview

What is an intelligent power module (IPM)?

This series of Intelligent Power Modules (IPM) for 3-phase motor drives contains a three-phase inverter stage, gate drivers. The SPM 31 design objective is to provide a minimized package and a low power consumption module with improved reliability.

What happens If IPM is under voltage?

IPM identified to be in under voltage state when the control power supply voltage drops UV trip level until it goes up to UV reset level. IPM submits and holds on fault output of under voltage after t_{dUV} until supply voltage returns to UV reset level.

What is a power output pin in an inverter?

Inverter power output pins. (e.g. motor). In SPM 31, technology was developed with DBC substrate that resulted in excellent heat dissipation characteristics. This technology made it possible to achieve improved reliability and heat dissipation. Power chips are attached directly to the DBC substrate.

How does carrier frequency affect the circuit current of IPM control power supply?

4 21 29 The circuit current of control power supply of IPM increases with the carrier frequency. The carrier frequency dependence of the circuit current of the IPM control power supply can be approximated as a straight line like the following figure. The gate of IGBT used in IPM has an input-capacitance ($C_{ies} = C_{GE} + C_{CG}$).

What is a control power supply for IPMS?

f control power supply for IPMSince the IGBT gate used for IPM has an input capacitance ($C_{ies} = C_{GE} + C_{CG}$), this current for charging (discharging) the gate flows every switching on (OFF) timing. Some IPMs have peak cu ate

current0AINGNDIGBTCGEFurthermore, dV / dt current from the IGBT collector flows into the control power.

How to connect a power supply terminal to an inverter?

The terminal is an open collector with resistor connected in series. It is possible to directly insert a opto-coupler (or LED) between this terminal and VD. Power supply terminal to inverter. In usual applications, connect this terminal to positive (+) line after rectifying AC line.
