

# **Is energy storage battery an industry in Australia**

## Overview

---

Why is battery storage important in Australia?

Battery storage is now key to Australia's clean energy transition. It stabilizes supply by storing extra renewable energy and delivering it on demand, even when solar or wind output drops. This helps prevent blackouts and ensures steady green energy flow. BESS installations are expected to double by 2027.

Is Australia a good place for battery manufacturing?

The global demand for batteries is set to quadruple by 2030 as the world transitions to net zero. Australia is well placed for battery manufacturing, thanks to: a history of pioneering battery and energy storage research. International companies are investing in Australian battery expertise.

What will Australia's future look like for battery storage?

Large battery storage demand: Large future battery storage demand with NSW making up 60% of Australia's grid-scale storage by 2030, as well as ambitious targets and incentives for distributed battery uptake. ESG credentials and long-term renewable energy prospects:.

Will Australia need a strong battery supply chain?

Strong and secure battery supply chains will be essential to achieving this transformation. The Australian Energy Market Operator (AEMO) has forecast that Australia will need 19 GW of energy storage capacity in the grid by 2030.

Why are energy companies investing in battery infrastructure?

Like governments, energy companies are also investing in battery infrastructure, to help strengthen Australia's energy grid. Earlier this year, Synergy began construction on Australia's second-largest battery project to date, the 500MW Collie Battery Energy Storage System (CBESS) in Western Australia [ii].

How many batteries are installed in Australia?

New SunWiz data shows 185,798 household batteries are now installed in Australia. The second half of 2024 alone saw 45,233 units sold—up 55% from the same period in 2023. Total 2024 sales reached 74,582 units, a sharp rise from around 46,000 in 2023. About 4.6% of Australia's 4 million solar installations now include a battery.

## Is energy storage battery an industry in Australia
