

# **Is it good to install solar photovoltaic panels in Russia**

## Overview

---

With a vast land area and high solar irradiance levels, Russia has significant untapped potential for solar PV installations, presenting opportunities for further market expansion and development in the coming years. Is Moscow a good place for solar PV projects?

The city itself lies on a plain that is part of the East European Plain. The area around Moscow has several large lakes, including Lake Seliger and Lake Nero, which could be suitable for solar PV projects. Areas to the south-east of the city have some higher elevations that could also be suited for larger scale solar PV projects.

How to optimize solar generation in Moscow?

Assuming you can modify the tilt angle of your solar PV panels throughout the year, you can optimize your solar generation in Moscow, Russia as follows: In Summer, set the angle of your panels to 39° facing South. In Autumn, tilt panels to 59° facing South for maximum generation.

How much solar energy does Moscow generate per kW?

In Moscow, Russia (latitude: 55.7483, longitude: 37.6171), the potential for solar energy generation varies significantly across different seasons. The average daily energy output per kW of installed solar capacity is as follows: 5.93 kWh in summer, 1.60 kWh in autumn, 0.91 kWh in winter, and 4.27 kWh in spring.

How much energy does a solar PV system produce a day?

Average 1.60kWh/day in Autumn. Average 0.91kWh/day in Winter. Average 4.27kWh/day in Spring. To maximize your solar PV system's energy output in Moscow, Russia (Lat/Long 55.7483, 37.6171) throughout the year, you should tilt your panels at an angle of 46° South for fixed panel installations.

What angle should solar panels be positioned?

In Autumn, tilt panels to  $59^\circ$  facing South for maximum generation. During Winter, adjust your solar panels to a  $68^\circ$  angle towards the South for optimal energy production. Lastly, in Spring, position your panels at a  $48^\circ$  angle facing South to capture the most solar energy in Moscow, Russia.

How much energy does a solar system produce per kW?

The average daily energy output per kW of installed solar capacity is as follows: 5.93 kWh in summer, 1.60 kWh in autumn, 0.91 kWh in winter, and 4.27 kWh in spring. The higher energy production during the summer months can be attributed to longer daylight hours and increased temperatures typical of this region within the Northern Temperate Zone.
