

# Lithuania energy storage fire protection system price

## Overview

---

What is a new energy storage project in Lithuania?

The plan involves direct grants to support investments in the deployment of at least 1,200 MWh of new energy storage systems across Lithuania. The tender will be administered by the Environmental Project Management Agency (EPMA). The deadline for applications is June 17, 2025.

Will Lithuania install 800 MWh of energy storage facilities?

In the procurement exercise, Lithuania is seeking to install at least 800 MWh of energy storage facilities, which will be directly connected to the transmission network by the end of 2028.

Why is Lithuania launching a major energy storage procurement exercise?

Only a day before cutting ties with the Russian power grid, the Baltic state announced the launch of a major energy storage procurement exercise. Lithuania has announced a EUR 102 million (\$ 105 million) energy storage tender in a bid to procure balancing services to the transmission system operator and ensure the resilience of its grid.

Can Li-ion battery energy storage systems be used for fire protection?

To develop an appropriate solution for the specific application of managed stationary storage systems it was necessary to conduct a series of experiments and tests. Our work has shown that Li-ion battery energy storage systems can be a controllable application when it comes to fire protection.

How can a battery energy storage system prevent a fire?

In addition, any embryo fire must be quickly extinguished using automated, targeted extinguishing systems to prevent a large number of cells, batteries or battery modules incurring thermal runaway and catching fire. Li-ion battery energy storage systems are an application with a clear need for comprehensive fire protection.

## Lithuania energy storage fire protection system price
