

# Make your own 220v to 380v inverter

**ESS**

**40.96kWh**

**61.44kWh**

## Overview

---

This circuit design does not have any functional limit and comes with an efficiency of more than 75%. And in addition, it is capable of compensating almost all of our power needs and that too at ver.

How to build an inverter?

To clearly understand how to build an inverter, let's go through the following simple construction details: As per the circuit schematic first complete the assembly of the oscillator section consisting of the smaller parts and the IC. It is best done by interconnecting the component leads itself and soldering the joints.

Can You Make your own inverter at home?

So, let's make our own inverter at home. This circuit design does not have any functional limit and comes with an efficiency of more than 75%. And in addition, it is capable of compensating almost all of our power needs and that too at very most of your power requirement at a very reasonable cost.

How many kW can a DIY inverter board handle?

The DIY inverter board can handle up to 1kW (depending the transformer size). Around \$30 was spent to build this project from locally sourced parts. Watch My Full YouTube Tutorial: Features Of This Project: Key Points: Powerplants use generators that generate a pure sinewave output. It's what you would find from the grid.

How much does a pure sine wave inverter cost?

Decent high power commercial pure sine wave inverters are very expensive! They range from \$120-\$400. With the EGS002 you can design all sorts of inverters with input voltage, output voltage and power ratings of your choice! For as low as \$20, depending on your specs and where you source your components.

How to design a transformer for a 120 volt inverter?

Let's quickly study the following attached example: Suppose you want to design an inverter transformer for a 120 VA inverter using a 12 Volt automobile battery as the input and need 230 Volts as the output. Now, simply dividing 120 by 12 gives 10 Amps, this becomes the required secondary current. Want to learn how to design basic inverter circuits?

.

What type of transformer do you need for an inverter circuit?

The transformer can be any ordinary iron core 9-0-9 V to 220 V or 120 V step down transformer, connected in the reverse order. The above explained were a few straightforward inverter circuit designs, however if you think these are pretty ordinary for you, you can always explore more advanced designs which are included in this website.

## Make your own 220v to 380v inverter

---

### How to get 380 Volts from 220

To make 380 volts out of 220 volts, you need a three-phase transformer of the required power for the voltage of one of the windings 220, and the other 380 V. Most often, they already have ...
