

Maximum specifications for double-glass modules

Overview

What is the maximum deformation of a double glass module?

The maximum deformation of long side is tested according to the mechanical load of +5400 Pa for DH1000h, and -5400 Pa for DH2000h. Test result is that double glass module has no problems such as bubbles and delamination after tested under the condition of distortion +DH2000h, and the power loss is 2%.

What is the thickness of a glass module?

The thickness of the front glass generally used for this type of structure is 3.2 mm. Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each.

What is a double glass module?

The double glass module design offers not only much higher reliability and longer durability but also significant Balance of System cost savings by eliminating the aluminum frame of conventional modules and frame-grounding requirements. The application of double-glass modules covers multiple markets including utility, residential and commercial.

What is the encapsulation reliability risk of double glass module?

The double glass module is superior to the conventional single glass module, which indicates that the encapsulation reliability risk of double glass module is good without delaminating risk. 90 Jing Tang et al. / Energy Procedia 130 (2017) 87–93 4 J. Tang et al. / Energy Procedia 00 (2017) 000–000 Fig. 3.

Are double glass modules better than traditional modules?

Compared to traditional modules with backsheet, modules with double glass are stronger and more durable, presenting less degradation due to thermal cycling stress. Results from the thermal cycling test up to 400 cycles show about 35% to 43% less degradation with double-glass modules than with

traditional modules with backsheet (Fig. 3).

Are double glass modules safe?

In addition, because of less micro-cracks and less moisture ingress, double-glass modules present a much lower risk of so-called “snail track” generation. A double-glass module was designed to pass fire-safety class A certification and UL1500V system voltage certification.

Maximum specifications for double-glass modules

[JA Solar PV Bifacial Double-glass Modules](#)

The low/normal level of load condition is applicable to the installation in most of environmental conditions: the maximum static load on the back of the modules is 2400 Pa (i.e. wind load), and ...

[Product Information](#)

[JA SOLAR PV BIFACIAL DOUBLE-GLASS MODULES](#)

...

The maximum number of modules that can be connected in a series string must be calculated in accordance with applicable regulations in such a way that the specified maximum system ...

[Product Information](#)

JINKOSOLAR PHOTOVOLTAIC MODULE

For a single glass module, the Fire rating is Class C in Canada, but the Module Fire Performance is Type 1 in the U.S. For a dual glass module, the Fire rating is Class C in Canada, but the ...

[Product Information](#)

D-Max Bifacial Double Glass Module

Bifacial ratio reaches 80%, 30% more power generation than conventional modules. Two-sided double-glazed modules, symmetrical structural design, low risk of hidden cracks. Higher power ...

[Product Information](#)

Single-glass versus double-glass: a deep dive into module ...

Double-glass modules, with their performance in the face of salt mist, high temperatures and high humidity, have won the market's favour. However, this trend is not ...

[Product Information](#)

Microsoft Word

The higher level of load conditions is applicable to the installation in extreme environment: the maximum static load on the backside of the Double glass Modules is 2400 Pa (i.e. wind load) ...
