

# **New energy storage in Lithuania**

## Overview

---

Trina Storage, the BESS division of solar energy firm Trinasolar, has announced deployment of three new battery storage projects in Lithuania totaling 90MW/180MWh. The installations will be located in Anyksciai, Skuodas, and Jonava, executed in partnership with EPC company Stiemo. What is Lithuania's first commercial battery storage facility?

Located near Vilnius, this project will be the country's first commercial battery storage facility and is expected to increase Lithuania's total storage capacity by approximately 50%. The system is scheduled to begin operations by the end of 2025.

Which power plant provides energy storage in Lithuania?

Kruonis Pumped Storage Plant provides energy storage, averaging electrical demand throughout the day. The pumped storage plant has a capacity of 900 MW (4 units, 225 MW each). Kaunas Hydroelectric Power Plant has 100 MW of capacity and supplies about 3% of the electrical demand in Lithuania.

Does Lithuania need a new energy system?

Lithuania imports a large share of its electricity needs, while bioenergy is taking the lead in domestic energy supply. By 2030, Lithuania wants to reduce its electricity imports by half and produce 70% of its electricity needs from domestic sources. It plans to complete its synchronisation with the continental European power system by early 2025.

How much electricity does Lithuania use?

Although the average electricity consumption in Lithuania is around 1500 megawatts, the installed capacity of both solar and wind power plants is expected to exceed 2000 megawatts in 2025, enabling surplus electricity to be stored and supplied to consumers during peak hours."
