

New energy storage type classification

Overview

What are the different types of energy storage technologies?

An overview and critical review is provided of available energy storage technologies, including electrochemical, battery, thermal, thermochemical, flywheel, compressed air, pumped, magnetic, chemical and hydrogen energy storage. Storage categorizations, comparisons, applications, recent developments and research directions are discussed.

How are chemical energy storage systems classified?

Chemical energy storage systems are sometimes classified according to the energy they consume, e.g., as electrochemical energy storage when they consume electrical energy, and as thermochemical energy storage when they consume thermal energy.

How many types of thermal energy storage systems are there?

It was classified into three types, such as sensible heat, latent heat and thermochemical heat storage system (absorption and adsorption system) (65). (Figure 14) shows the schematic representation of each thermal energy storage systems (66). Figure 14. Schematic representation of types of thermal energy storage system. Adapted from reference (66).

What are some examples of energy storage reviews?

For example, some reviews focus only on energy storage types for a given application such as those for utility applications. Other reviews focus only on electrical energy storage systems without reporting thermal energy storage types or hydrogen energy systems and vice versa.

What are the different methods used for storing energy?

This article encapsulates the various methods used for storing energy. Energy storage technologies encompass a variety of systems, which can be classified into five broad categories, these are: mechanical, electrochemical (or

batteries), thermal, electrical, and hydrogen storage technologies.

What are the different types of mechanical energy storage?

Among the prominent types of mechanical energy storage are Pumped Hydroelectric Energy Storage (PHES), Compressed Air Energy Storage (CAES), Flywheel Energy Storage (FES), and Gravity Energy Storage (GES).
