

Nigeria outdoor communication battery cabinet export risks

Overview

Why are Nigerian Ports a major obstacle to trade?

Nigerian port practices continue to present major obstacles to trade. Importers report erratic application of customs regulations, lengthy clearance procedures, high berthing and unloading costs, and corruption. Due to lack of space at Lagos ports, ships queue for days, and in some cases weeks or months, before being able to berth and unload.

Why is Nigeria restricting imports?

In a bid to protect local industries and grow several strategic sectors, especially agriculture, the Nigerian government has continued to restrict or place bans on certain imports. See section below on “Prohibited & Restricted Imports.”.

What is the effective rate of imports in Nigeria?

Nevertheless, effective rates tend to be higher since the Nigerian government may apply additional charges (e.g., levies, excise, and VAT) on the imports. However, the total effective rate of each line item is not to exceed 70%.

Why is import clearance delayed in Nigeria?

Most goods destined for Nigeria, especially in the food, drug, and cosmetics, require inspection or certification from authorities or appointed third-party contractors. Because the government lacks the capacity to undertake inspections, testing, and reviews, clearance of imports is typically delayed to the detriment of the importer.

Why are Nigerian Ports so expensive?

Due to delays caused by congestion and the poor condition of the port access roads, operations at Nigerian ports are among the most expensive in the world. However, there have been reported slow but steady improvements in the goods transit process.

What are local content laws in Nigeria?

Local content laws are in place across sectors of the Nigerian economy. Originally introduced to ensure local participation in labor and across the value chain of the oil and gas sector, local content requirements have gradually begun to spread to other sectors such as information and communications technology (ICT) and advertising.
