

North Korea custom-made outdoor power supply

Overview

Does North Korea have a thermal power station?

While North Korea's thermal power stations continue to play an important role in the state's energy mix, the stations were built decades ago in collaboration with engineers from the former Soviet Union and China. The outdated technology makes them inefficient, and thermal capacity has not risen significantly in decades.

How much electricity does North Korea use?

For 2020, Statistics Korea estimates North Korea's total electricity supply at 23.9 terawatt hours (TWh), while Nautilus estimates only 14 TWh. Both agree that hydro supplies the largest portion of electricity to the country and are in broad agreement on the amount.

Does North Korea need hydropower?

In contrast, hydropower takes advantage of North Korea's numerous mountains and rivers but also has a major weakness. The frigid temperatures every winter freeze rivers or reduce water flow, decreasing electricity production when the country needs it the most. Regardless, North Korea continues to invest in hydro projects, both large and small.

Will North Koreans get power a day a year?

While the regime regularly promises to solve the electricity problem, the vast majority of North Koreans remain severely energy deprived. Those in Pyongyang may get power every day, though with rolling blackouts. But for some in the more remote areas of the country, this could mean only getting power one day a year.

How old are North Korea's energy problems?

North Korea's energy problems—and the state's promises to fix them—are almost as old as the country itself. After the liberation of the Korean Peninsula

from Japanese colonialism in 1945, the northern half of the peninsula relied on its abundant water resources to generate electricity.

Why does North Korea have a power shortage?

The country's power shortages are exacerbated by the sale of electricity to China. Despite its domestic electricity shortage, North Korea is a net exporter of electricity to China.
