

# **North Macedonia plans energy storage projects**

## Overview

---

How to increase energy storage and system flexibility in Macedonia?

Furthermore, in order to increase the energy storage and system flexibility, among top priorities is the construction of pumped-storage hydro power plant Chebren. The objective is up to 2028 this power plant to be commissioned. The natural gas market in Macedonia is liberalized starting from 2015.

How will the necp impact North Macedonia?

The NECP also envisages the potential for GHG emission reduction from the waste sector, by improving waste management and treatment practices. Concerning the energy efficiency dimension, North Macedonia will strive to maximise the savings in primary and final energy consumption.

Should North Macedonia accelerate the transition to renewables?

Like others in the region, North Macedonia must balance its need to rapidly accelerate the transition to renewables to secure its energy future with the need to ensure that future is one where both the country's nature and people thrive.

What is the Integrated National Energy & Climate Plan of North Macedonia?

The Integrated National Energy and Climate Plan of North Macedonia elaborates on all five dimensions of the Energy Union i.e. decarbonisation (addressing two segments: greenhouse gas emissions and renewable energy sources), energy efficiency, security of energy supply, internal energy market, and research, innovation and competitiveness.

What is Macedonia's Energy Strategy?

Thus, Macedonia's goal is to increase the number of consumers that can provide balance services. The Energy Strategy envisages introduction of a significant share of electric vehicles in the system, as a way of increasing the RES share in the transport.

How much electricity will North Macedonia produce a year?

This means that if only a half of these priority locations were built out, they could produce 7.7 terawatt-hours of electricity per year—which exceeds North Macedonia’s current electricity consumption and could even fully cover the estimated electricity consumption in 2030 under the energy efficient scenario of the NECP.

## North Macedonia plans energy storage projects
