

# Off-grid inverter companies

## Overview

---

What is an off-grid inverter?

An off-grid inverter's primary function is to convert DC electricity into useable AC which can be used by our home appliances. However, we are about to show you that the best all-in-one off-grid inverters of 2025 can do much more than that.

What is the most powerful off-grid inverter?

The SA-12K is the most powerful off-grid inverter developed by SolArk. With 9kW, it has no problem to power a fully off-grid house. It features 2 MPPT solar charge controllers that allow up to 13kW of solar panels. This is more than enough to cover the daily needs of the average American house.

Do off-grid inverters have a surge rating?

Most off-grid inverters can supply double or more of the continuous rating for a short time to handle surge power spikes from motors, compressors, pumps, etc. The surge rating is critical for off-grid systems to operate under various load conditions without tripping out or shutting down unexpectedly.

Which Growatt SPF 3000TL is the best off-grid inverter?

The GroWatt SPF 3000TL is a good entry level off-grid inverter. It includes a solar charge controller and a high efficiency pure sine wave inverter (93%). You can configure it to accept grid/backup generator (AC) or solar power as a priority. As an option you can add a WIFI module for monitoring purposes.

What is the best solar inverter?

We've selected the EasySolar 12/1600, an all-in-one inverter that includes an MPPT solar charge controller and a pure sine wave inverter. All you need to do is plug in your batteries and solar panels. The batteries can be charged by the solar panels or an external AC source (generator, utility grid) as a backup. Max. PV input power: 2000W.

## What size inverter do I Need?

As we demonstrated in our list, there are inverters of all size, from 1.3kW to 12kW. For a small off-grid cabin without AC, we recommend 1kW to 3.5kW. For an off-grid house with a single AC unit, 5kW will do a great job. To power a large off-grid house with all the regular appliances and an AC, you'll need around 10kW of power.

## Off-grid inverter companies
