

Outdoor Solar Electric Water Pump Inverter

Overview

How to choose a solar pump inverter?

Understand the rated power of the water pump. Normally, the rated power of the solar pump inverter should be slightly more than or equal to the rated power of the water pump to ensure that the pump can be operated normally. For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher.

Can a solar inverter drive a water pump?

Let's explore them. Three solar inverters can drive a water pump and convert photovoltaic direct current into alternating current. It is an inverter designed for running water pumps using solar power. It directly transforms the direct power produced by solar panels into an alternating current to drive the pump.

Does a water pump need an inverter?

An inverter takes power from incoming DC voltage and turns the power into AC voltage. If the water pump uses AC power, then an inverter is required if you want to run the water pump using solar power (DC). Usually that inverter will also allow a backup source of power, like AC Grid or generator power, to be plugged in when solar is not available.

How does a solar pump inverter work?

Unlike a regular inverter, which only converts DC power to AC power, a solar pump inverter is designed to change the frequency of the output, which lets you adjust the pump speed. This lets you control the flow rate and pressure of your pump based on the solar power available, which makes your system more efficient.

What type of power does a solar water pump use?

Solar pumps run on two different types of power: direct current (DC) and alternating current (AC). DC power is inexpensive and commonly used for

more humble uses, like bird baths and solar water pumps for fountains.

Does a solar water pump work if there is no electricity?

Solar panels make DC power, which doesn't work with things that run on AC power. The inverter changes the DC to AC, so the solar energy can run the pump. This is very important for solar water systems to work good even when there's no electricity from the electric company.
