

Outdoor power supply deployment

Overview

What is a portable power distribution unit?

It has been designed according to the North American needs of temporary power distribution systems, especially outdoor atmospheric conditions and safety measures. Portable Power Distribution Units are sized based on current draw and will come with the appropriate circuit protection devices.

Do you need a temporary power distributor?

As electric supply lines are not available everywhere, you can always use an electric generator along with a temporary power distributor to build a safe power system for uninterrupted power supply. Apart from using these PDUs at temporary locations, they are also used in events where electric supply is easily accessible.

How much does a power distribution unit cost?

Furthermore, the design needs to be economical, there are so many variations and specifications to follow that consumers may choose the wrong set-up for their needs. A typical domestic-level Power Distribution Unit costs around \$600, whereas the cost of a commercial scale PDU can cost in upwards of \$2000.
