

# **Pcs energy storage lithium battery**

## Overview

---

A power conversion system is a mono- or bidirectional converter that can control the charging and discharging of batteries, perform AC and DC conversions, and directly supply power to an AC load in the absence of a power grid. Talk to us, our experts will be pleased to provide the right configuration for your.

To achieve the bidirectional conversion of electric energy, a power conversion system is a component connected between the energy storage battery system and the power grid. The PCS charges the batteries in the event of excessive power.

We recommend having bidirectional energy meters on DC-side and AC-side of the power conversion system. This gives an indication for the conversion losses. For billing purpose, a bidirectional CT/PT meter is installed at the transformer station. Additional.

The block drawing has been streamlined. Renewable energy embedded systems may become exceedingly complex. We can construct entire systems or standalone devices.

Our devices are tested and approved by various organizations 1. GB/T 12325 Power Quality Supply Voltage Deviation 2. GB/T 14549 Power Quality Harmonics of Public Grid 3. GB/T.
