

Poland s wind and solar power and energy storage ratio

Overview

Does Poland need solar & wind power?

Current and required solar and wind power in Poland for 2030 and 2040. Energy prices remain a key concern not only for Polish industry but for Europe as a whole. According to the study, both the United States and China benefit from access to low-cost fossil fuels and renewable energy, while Poland faces high energy costs and regulatory obstacles.

What percentage of Poland's electricity is renewable?

Poland aims for 56% renewable electricity by 2030, which is below the global share of 60% renewable electricity set out in the IEA Net Zero Emissions scenario. Explore the latest data on Poland's energy transition. How clean is Poland's electricity?

.

Should Poland expand its wind energy capacity?

To further enhance low-carbon electricity generation, Poland should consider expanding its wind energy capacity, which is already contributing significantly to the country's clean electricity production.

Will Poland become a hotbed of energy storage project development?

Poland, Europe's tenth-largest economy, is set to become a hotbed of energy storage project development as the share of renewable energy on its grid soars. The country built out a record 1.2 GW of onshore wind power in 2023, according to industry body WindEurope, bringing its total installed capacity to around 9.4 GW.

What is Poland's share of wind & solar?

Its share of wind and solar (23%) is above the global average (15%). Compared to its neighbours, this is far below the wind and solar share in

Germany (43%), but much higher than that in Czechia (6%). Poland relied on fossil fuels for 70% of its electricity in 2024, mostly from coal. Its emissions per capita were above the global average.

What is Poland's biggest source of electricity?

Poland's biggest source of clean electricity is wind (14%). Its share of wind and solar (23%) is above the global average (15%). Compared to its neighbours, this is far below the wind and solar share in Germany (43%), but much higher than that in Czechia (6%). Poland relied on fossil fuels for 70% of its electricity in 2024, mostly from coal.
