

Power cabinet loss in communication base stations

Overview

- Shaking table tests were conducted on a switching power cabinet considering physical damage and functionality loss.

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

What causes a communication base station to fail?

Power interruption is a significant contributor to communication base station functional failure. Communication systems closely rely on power systems, and power outages can result in widespread station interruptions. In the case of the earthquake in Changning County, 90% of disrupted base stations experienced power interruptions as the cause .

How does a communication tower damage a base station?

The communication tower and its antenna equipment are responsible for signal transmission and reception, and their damage directly affects the normal operation of the base station. This study mainly considers tower body damage (X 11) and antenna damage (X 12).

What happens if a base station is damaged?

For example, when an earthquake occurs, base stations may reduce their transmission power due to power limitations, resulting in decreased signal quality and limited functionality. Additionally, some base stations can still provide partial signal coverage even in damaged conditions .

What type of damage does a communication base station suffer?

Based on field investigations after the Yangbi earthquake , this paper categorizes typical seismic damage of communication base stations as follows: Communication infrastructure damage is particularly severe, with

building collapse leading to equipment destruction.

What causes base station functional failure?

In Fig. 6, the causes of base station functional failure (T) are identified: power interruption (I 1), damage to communication room (I 2) (equipment included), and damage to communication towers (I 3).
