

# **Recommendation of high-power real-standard inverter**

## Overview

---

Can an inverter provide more reactive power?

The ability to provide additional reactive power while not operating at maximum active power capability is part of automatic voltage control and an ERS. If the inverter-based resource can provide more reactive current within its limitations to maintain scheduled voltage pre- or postcontingency, the inverter should be programmed to do so.

Should smart inverters behave on the grid?

tly DER with smart inverters should behave on the grid. This paper aims to educate utilities, developers, and state regulators on the voltage regulation options available under the new IEEE standard, and makes recommendations based on the experience of states and utili.

Can an inverter withstand a high voltage?

Inverters should be able to withstand higher voltages for shorter durations and higher voltage magnitudes typically only persist for a very short time and decay very quickly.<sup>80</sup> Within the curve, these voltage spikes should not result in inverter tripping action.

How much power can an Inverter Supply?

At nominal voltage, the inverter-based resource can supply 1.0 pu apparent power continuously to the grid.<sup>38</sup> Each inverter has a capability curve similar to a synchronous machine, which is affected by terminal voltage of the inverter. At higher and lower voltage, the reactive capability is restricted at leading and lagging output, respectively.

What are inverter specifications?

The specifications are designed to be independent of specific technology and relate to all types of inverter-based resources, such as wind, solar PV, and battery energy storage systems (BESSs). This guideline uses examples of each

interchangeably.

Do inverters meet performance specifications?

**Inverter Capability:** Inverters should be designed to have the capability to meet the performance specifications shown in Table 3.2. It is expected that inverters meet these performance specifications, and that inverter-based resources are installed with similar performance characteristics as a default value.
