

# **Slovakia s GW-scale solar energy**

## Overview

---

Ján Karaba, director of the association, told pv magazine last year's deployment consisted of 113.6 MW of residential solar, 142.7 MW of commercial-scale solar and 17.7 MW of utility-scale solar. The country's cumulative solar capacity now stands at over 1.1 GW. How much energy does Slovakia use?

Primary energy use in Slovakia was 194 TWh and 36 TWh per million inhabitants in 2009. Slovakia has a plan to get renewable sources of energy up to 19.2% by 2030. From 2024, following the completion of two new nuclear reactors, Slovakia will return to being a net exporter of electricity. Slovnaft is the largest oil refinery in Slovakia.

What is Slovakia's national energy and Climate Plan?

Slovakia's National Energy and Climate Plan sets an ambitious target of achieving a 19.2% share of renewable energies in gross final energy consumption by 2030.

Why is electricity growing in Slovakia?

As Slovakia moves forward, electrifying other sectors like transport, heating, and industry will demand an increase in electricity generation, further highlighting the importance of expanding its low-carbon infrastructure. Is Electricity Growing in Slovakia?

When examining electricity consumption trends, there is cause for concern.

Is biomass a viable energy source in Slovakia?

Biomass currently dominates electricity generation from renewables, followed by biogas, solar, and hydropower. Despite its high potential, wind energy remains largely untapped in Slovakia due to its perceived instability and regulatory hurdles.

Does Slovakia have low-carbon electricity?

Historically, Slovakia's journey in low-carbon electricity has been characterized by periods of significant growth and some challenges. In the mid-1980s, nuclear power saw a substantial increase, and the trend continued into the late 1990s and early 2000s with notable growth, particularly in 2000.

Why is wind energy untapped in Slovakia?

Despite its high potential, wind energy remains largely untapped in Slovakia due to its perceived instability and regulatory hurdles. Since 2009, the construction of wind power plants has almost completely halted, with two small wind parks existing in Cerová and Myjava.

## Slovakia s GW-scale solar energy

---

### Solar electric power Slovakia

Soaring energy prices, new re-served capacities for renewables, and a few incentive schemes, among other factors, are likely to result in new large-scale solar PV plants being ...
